

DICKSON UMEH

EXPERIENCE

January 2026 - Current

Health Data Analyst freelance | Sheffield, South Yorkshire

- Analysed large healthcare datasets using R, SQL, Excel, and Power BI to generate actionable insights on service performance, patient flow, and operational efficiency.
- Designed and developed interactive dashboards in Power BI to monitor key healthcare KPIs including waiting times, pathway pressure, long waiters, performance targets, and service utilisation.
- Wrote complex SQL queries to extract, clean, join, and summarise healthcare data from relational databases for reporting and analysis.
- Performed data cleaning, validation, and transformation on raw healthcare datasets to improve data quality and ensure reliable reporting outputs.
- Conducted exploratory data analysis in R to identify patterns, trends, bottlenecks, and variation in clinical and operational datasets.
- Modelled and analysed patient pathway and workflow data, identifying inefficiencies and delays to inform service improvement initiatives.
- Analysed Referral to Treatment (RTT) data to assess provider performance, waiting list size, long-wait patient burden, and specialty-level backlog pressures.
- Developed healthcare performance indicators and comparative metrics that enabled evaluation of service delivery across providers, specialties, and time periods.
- Produced visual reports and performance summaries that facilitated evidence-based decision-making in healthcare settings.
- Used Power BI data modelling and DAX measures to create meaningful performance metrics such as cancellation rates, no-show rates, turnaround times, and utilisation measures.
- Applied statistical and analytical techniques in R to compare trends across patient groups, time periods, and service categories.
- Built end-to-end analytics projects using public healthcare datasets, including waiting list analysis, prescribing analysis, and PET-CT workflow modelling.
- Created and analysed synthetic operational datasets to simulate PET-CT imaging workflows and assess delays, throughput, scanner performance, and reporting turnaround.
- Communicated analytical findings clearly through dashboards, charts, and written summaries tailored to operational and clinical improvement contexts.
- Demonstrated strong understanding of healthcare operations, clinical pathways, and imaging service workflows, allowing technical analysis to be grounded in real clinical practice.
- Supported project documentation and reproducibility by maintaining clear code structure, workflow steps, and GitHub project repositories.

EDUCATION

2024

Master of Science | Health Data Science
Swansea University, Swansea

📍 South Yorkshire, England

📞 07393132386

SUMMARY

Healthcare Data Analyst with an MSc in Data Science and a clinical background in medical radiography, currently working as a PET-CT Radiographer. Skilled in analysing healthcare and operational datasets using R, SQL, Excel, and Power BI to generate insights on patient flow, service performance, waiting times, and workflow efficiency. Experienced in data cleaning, transformation, dashboard development, KPI reporting, and translating complex data into clear, decision-support outputs. Combines technical analytical ability with strong understanding of clinical pathways, imaging services, and healthcare operations.

SKILLS

- Healthcare analytics
- Data cleaning
- Statistical analysis
- SQL query writing
- Exploratory data analysis
- Data visualization
- Dashboard development
- Performance metrics
- Healthcare operations
- Workflow optimization
- Technical documentation

- Dissertation in image analysis
- Coursework in [SCIENTIFIC COMPUTING AND HEALTHCARE, BIOINFORMATICS FOR GENOME ANALYSIS, HEALTH DATA MODELLING, INTRODUCTORY ANALYSIS OF LINKED HEALTH DATA, MACHINE LEARNING IN HEALTHCARE, HEALTH DATA VISULISATION]

2019

Bachelor of Science | Medical radiography and radiological science
University of Nigeria, Nsukka

PROJECTS

PET-CT Ops Dashboard Project

Developed a healthcare analytics project focused on PET-CT service performance using data analysis and dashboarding techniques. Analysed operational metrics such as scan activity, workflow timings, and service trends to generate insights into utilisation and performance. Built visual outputs to demonstrate how data can support monitoring, planning, and decision-making within an imaging service environment.

2. NHS Waiting List / RTT Performance Analysis

Completed an end-to-end analysis of NHS Referral to Treatment waiting list data to assess provider performance, backlog pressure, and long-wait patient burden. Used SQL, R, Excel, and Power BI to clean, structure, analyse, and visualise healthcare performance data. Produced dashboards and comparative insights showing waiting list size, 18-week performance, specialty backlog, and operational pressure across providers.

3. PET-CT Workflow Efficiency Analysis Using Synthetic Data

Designed and analysed a synthetic PET-CT workflow dataset to simulate the patient pathway from referral through reporting. Used R to generate, clean, and analyse operational data covering delays, attendance, scanner activity, turnaround times, and reporting performance, then visualised findings in Power BI. The project was developed to identify workflow bottlenecks and demonstrate how analytics can support efficiency improvement in imaging services.
